Abdullah Farhat

+1 (845) 330-9804 | Abdullah.Farhat.UG@dartmouth.edu | linkedin.com/in/afarhat | afarhat.org | Poughkeepsie, NY

Professional Summary

Socially passionate CS and engineering student focused on free tools for people priced out of paid ones. Looking to bring AI-assisted development, and the checks that keep model output honest, to Salesforce.

Education

B.A. Computer Science, Minor in Mathematics, **Vassar College** Poughkeepsie, NY | May 2028

Coursework: Data Structures & Algorithms, Software Design, Computer Organization, Theory of Computation. **GPA 3.88/4.00**

Study Away, Thayer School of Engineering, **Dartmouth College** Hanover, NH | Sep 2026 - Jun 2027

Coursework in progress: Principles of Machine Learning, Discrete and Probabilistic Systems, Statistical Methods in Engineering.

Experience

Assistant Research Software Engineer, jsPsych, Vassar College Poughkeepsie, NY | May 2025 - May 2026

- Gave labs a free alternative to 3 NIH Toolbox cognitive tasks, licensed at up to $2,500 a year, by rebuilding them as open-source **TypeScript** packages for **jsPsych**, a library for online studies, in one summer with AI coding tools
- Enabled the international Heat and Cognition Project to run its tasks in local languages across 40+ cities by building **JavaScript** and **HTML/CSS** tasks with an i18n system translators fill in through one text file
- Set our team's code standard and wrote a CLAUDE.md so teammates' AI coding tools followed it; as main code reviewer, caught AI-generated overcomplications like Math.random() in place of jsPsych's randomization
- Piloted Codacy static analysis in GitHub Actions CI, with a Semgrep rule and the tests its coverage metrics flagged
- Wrote a follow-up jsPsych tutorial for amateur developers that the full-time team used to redesign onboarding

Projects

farhat: Full-Stack AI College-Planning Platform (2026) (Next.js, TypeScript, Claude API, Prisma, Postgres)

I started it while helping my niece and my brother plan for college. Built solo with **AI coding tools**, it turns a profile into a roadmap for first-generation, low-income and international students. The model only recommends scholarships and links from a vetted list, so it cannot invent one. Its plan edits need the student's approval. **SQL** search on **Postgres**, 249 Vitest and 7 Playwright tests. Preparing for beta testing with my high school and family kids back home.

Placebo World: 2D Adventure Game (Java, LibGDX, Android, JUnit)

Team-built ~7,000-line **Java** game for Android and desktop, with JUnit tests. Designed the inventory and crafting systems (item stack rules, recipe validation) and led its **object-oriented** MVC redesign.

Wealth: Agentic Market-Briefing Tool (JavaScript, Claude Code, SEC EDGAR)

Claude Code agent skill that pulls live market data, runs my SEC insider-filing tool and logs a daily Go/Wait/Stop verdict

Leadership

House President, Jewett House: Led a 20-member team with a $2k budget for 223 residents May 2025 - May 2026

Tech Chair, Vassar Coders++: Mentored students on open-source contributions and portfolios Sep 2024 - May 2026

Skills

Languages: Java, TypeScript/JavaScript, SQL, HTML/CSS

AI-assisted development: Claude Code, Codex, Gemini, GitHub Copilot, prompting, LLM tool-use (Claude API)

Frameworks & testing: Next.js, Prisma, Postgres, LibGDX, Vitest, Playwright, JUnit, npm, Git/GitHub
